Dear Hiring Team,

Cohere's North agentic platform is for enterprises that need RAG and multi-step agents in production — and Forward Deployed Engineer, Europe (Berlin listed) is the role that takes that platform into customer environments. That matches the work I have been doing hands-on. I am writing about the Forward Deployed Engineer, Agentic Platform (Europe) role.

What I bring

- About ten years of Java/Spring backend work, including US large-enterprise delivery: Marsh in Phoenix (Bluestream / Digital Broker for Affinity — ~95,000 colleagues across 130 countries) and BCBSA in Chicago (national hub connecting state Blue Cross Blue Shield plans, ~118 million members system-wide).
- Since early 2026, one of a handful of engineers in an initial core AI team at a large retail-energy company: production AI triage with Azure OpenAI, vector retrieval, and a human approval step before any action, now used by several teams.
- Own agentic software-delivery platform (live): approval-gated agents, RAG with labelled retrieval evals, MCP tool boundaries — public proof that AI systems work can hold up past a demo.

How it fits this role

- Production RAG/triage with vector retrieval, Azure OpenAI, and human approval; plus personal platform with labelled retrieval evals and MCP boundaries.
- Production Python/backend craft for clean, testable, observable agent applications.
- Berlin among listed locations; English; comfortable with customer-facing technical discussions and travel.

Agentic platforms only matter when evaluation and production discipline travel with the demo. That is already how I design. At this point in my career I want that customer-facing, architecture-adjacent seat more than another pure backend lane.

Enterprises will judge North by what survives contact with their data — I want to be the FDE who helps that survival happen.

Kind regards,

Karthikeyan Devadoss
