Dear Hiring Team,

The Sr. Forward Deployed Engineer (Fullstack) role is for builders who live at the intersection of technology and business impact — shipping full-stack applications on Databricks with customers. That customer-facing ownership is what I am selecting for next. I am writing about the Sr. Forward Deployed Engineer - FDE (Fullstack) role.

What I bring

- About ten years of Java/Spring backend work, including US large-enterprise delivery: Marsh in Phoenix (Bluestream / Digital Broker for Affinity — ~95,000 colleagues across 130 countries) and BCBSA in Chicago (national hub connecting state Blue Cross Blue Shield plans, ~118 million members system-wide).
- Since early 2026, one of a handful of engineers in an initial core AI team at a large retail-energy company: production AI triage with Azure OpenAI, vector retrieval, and a human approval step before any action, now used by several teams.
- Own agentic software-delivery platform (live): approval-gated agents, RAG with labelled retrieval evals, MCP tool boundaries — public proof that AI systems work can hold up past a demo.

How it fits this role

- Hands-on delivery across backend services and AI features; used to scope, timelines, and measurable outcomes.
- Production AI triage adopted by several teams — translating fuzzy needs into something people actually use.
- Berlin-listed; English; large-enterprise delivery background in the US and remote-from-Berlin work.

Full-stack FDE work rewards people who can hold the whole path: data, app, and the customer's definition of done. That is how I already ship. At this point in my career I want that customer-facing, architecture-adjacent seat more than another pure backend lane.

I want to build the Databricks applications customers keep — not just the slides that describe them.

Kind regards,

Karthikeyan Devadoss
