Dear Hiring Team,

Nebius is building the AI cloud for teams that need serious compute and infrastructure, not another thin wrapper on someone else's GPUs. Physical AI Infrastructure FDE work sits exactly where customer systems meet that platform — and that is the seat I want next. I am writing about the Forward Deployed Engineer, Physical AI Infrastructure role.

What I bring

- About ten years of Java/Spring backend work, including US large-enterprise delivery: Marsh in Phoenix (Bluestream / Digital Broker for Affinity — ~95,000 colleagues across 130 countries) and BCBSA in Chicago (national hub connecting state Blue Cross Blue Shield plans, ~118 million members system-wide).
- Since early 2026, one of a handful of engineers in an initial core AI team at a large retail-energy company: production AI triage with Azure OpenAI, vector retrieval, and a human approval step before any action, now used by several teams.
- Own agentic software-delivery platform (live): approval-gated agents, RAG with labelled retrieval evals, MCP tool boundaries — public proof that AI systems work can hold up past a demo.

How it fits this role

- Cloud and backend depth (AWS Lambda/SAM, SQS, production Java/Spring) for customer integrations on an AI infrastructure stack.
- Comfortable embedding with customers on ambiguous delivery problems and turning them into repeatable patterns.
- Berlin / Remote Europe base, English day-to-day, used to US-timezone stakeholders from Marsh and BCBSA.

Building AI that lives in the physical world needs the same production discipline I already use: human approval before action, clear tool boundaries, and measurable quality — not demos that fall over in week two. At this point in my career I want that customer-facing, architecture-adjacent seat more than another pure backend lane.

If Nebius is going to be the cloud physical-AI teams trust, the FDE seat is where that trust gets earned — and that is the work I want to do with your customers.

Kind regards,

Karthikeyan Devadoss
