Dear Hiring Team,

Taktile's decisioning platform is where AI meets regulated enterprise decisions — and Solution Architect in Berlin hybrid is the role that makes those architectures commercially and technically sound. That is the architect-adjacent seat I am building toward. I am writing about the Solution Architect role.

What I bring

- About ten years of Java/Spring backend work, including US large-enterprise delivery: Marsh in Phoenix (Bluestream / Digital Broker for Affinity — ~95,000 colleagues across 130 countries) and BCBSA in Chicago (national hub connecting state Blue Cross Blue Shield plans, ~118 million members system-wide).
- Since early 2026, one of a handful of engineers in an initial core AI team at a large retail-energy company: production AI triage with Azure OpenAI, vector retrieval, and a human approval step before any action, now used by several teams.
- Own agentic software-delivery platform (live): approval-gated agents, RAG with labelled retrieval evals, MCP tool boundaries — public proof that AI systems work can hold up past a demo.

How it fits this role

- Took part in architecture discussions with the lead; strong integration patterns (APIs, events, messaging) from Marsh and BCBSA.
- Security-minded delivery on sensitive healthcare and insurance data paths; comfortable with auth, audit, and careful data handling.
- Berlin hybrid; English; experience across pre-sales-style technical conversations and post-delivery hardening.

Decisioning in financial services only works when architecture is right for the customer and still commercially sound. I design with that tension in mind — not architecture theatre. At this point in my career I want that customer-facing, architecture-adjacent seat more than another pure backend lane.

If Taktile is going to be how enterprises make better decisions with AI, I want to help shape the architectures that hold up.

Kind regards,

Karthikeyan Devadoss
