Dear Hiring Team,

Senior Forward Deployed Engineer at Taktile is the higher-ownership version of embedding with customers on AI decisioning — more scope, same Berlin hybrid craft. I am writing for that senior FDE seat. I am writing about the Senior Forward Deployed Engineer role.

What I bring

- About ten years of Java/Spring backend work, including US large-enterprise delivery: Marsh in Phoenix (Bluestream / Digital Broker for Affinity — ~95,000 colleagues across 130 countries) and BCBSA in Chicago (national hub connecting state Blue Cross Blue Shield plans, ~118 million members system-wide).
- Since early 2026, one of a handful of engineers in an initial core AI team at a large retail-energy company: production AI triage with Azure OpenAI, vector retrieval, and a human approval step before any action, now used by several teams.
- Own agentic software-delivery platform (live): approval-gated agents, RAG with labelled retrieval evals, MCP tool boundaries — public proof that AI systems work can hold up past a demo.

How it fits this role

- Ten years of backend engineering with recent production AI delivery and multi-team adoption.
- Comfortable leading technical deployment conversations and reviewing production Python/SQL/API work.
- Berlin hybrid; English; US large-enterprise delivery (Marsh Phoenix, BCBSA Chicago) plus remote-from-Berlin execution.

Senior FDE work is judgment under ambiguity: what to build, what to refuse, and how to leave the customer stronger. That is the bar I want to be measured on. At this point in my career I want that customer-facing, architecture-adjacent seat more than another pure backend lane.

I want the senior seat where Taktile's decisioning platform meets the customer's hardest production constraints.

Kind regards,

Karthikeyan Devadoss
