Dear Hiring Team,

Forward Deployed Engineer (Ops) at Taktile sits with Engineering, Product, and Customer Success so customers get maximum value from the decision platform — prompt engineering, APIs, and day-to-day reliability. Berlin hybrid; that customer-value loop is attractive. I am writing about the Forward Deployed Engineer (Ops) role.

What I bring

- About ten years of Java/Spring backend work, including US large-enterprise delivery: Marsh in Phoenix (Bluestream / Digital Broker for Affinity — ~95,000 colleagues across 130 countries) and BCBSA in Chicago (national hub connecting state Blue Cross Blue Shield plans, ~118 million members system-wide).
- Since early 2026, one of a handful of engineers in an initial core AI team at a large retail-energy company: production AI triage with Azure OpenAI, vector retrieval, and a human approval step before any action, now used by several teams.
- Own agentic software-delivery platform (live): approval-gated agents, RAG with labelled retrieval evals, MCP tool boundaries — public proof that AI systems work can hold up past a demo.

How it fits this role

- Strong REST/API and backend background; comfortable troubleshooting with enterprise users.
- Hands-on with agent-style workflows and approval-gated AI paths from NRG triage and my own platform.
- Berlin based; English; relationship-driven technical delivery.

Ops-flavoured FDE work is still engineering: clear runbooks, careful changes, and users who feel heard. I like that combination. At this point in my career I want that customer-facing, architecture-adjacent seat more than another pure backend lane.

If Taktile's customers are going to feel the platform as a daily advantage, Ops FDE is where that feeling gets built — and I want that work.

Kind regards,

Karthikeyan Devadoss
