Dear Hiring Team,

LangChain is the platform teams use to put agents, RAG, and evaluation into production — and Deployed Architect, Professional Services (Amsterdam) is the customer-facing architecture seat that makes those systems survive real deployments. That Deployed Architect title is the shape I want next. I am writing about the Deployed Architect, Professional Services (Amsterdam) role.

What I bring

- About ten years of Java/Spring backend work, including US large-enterprise delivery: Marsh in Phoenix (Bluestream / Digital Broker for Affinity — ~95,000 colleagues across 130 countries) and BCBSA in Chicago (national hub connecting state Blue Cross Blue Shield plans, ~118 million members system-wide).
- Since early 2026, one of a handful of engineers in an initial core AI team at a large retail-energy company: production AI triage with Azure OpenAI, vector retrieval, and a human approval step before any action, now used by several teams.
- Own agentic software-delivery platform (live): approval-gated agents, RAG with labelled retrieval evals, MCP tool boundaries — public proof that AI systems work can hold up past a demo.

How it fits this role

- Multi-agent / RAG / evaluation craft from production AI triage and a public agentic delivery platform (LangGraph-class patterns, labelled retrieval evals, MCP boundaries).
- Customer-facing technical delivery: architecture discussions with the lead plus backend depth for cloud/Python integrations.
- Berlin-based, English day-to-day; comfortable with remote collaboration and travel for professional-services engagements.

Agent platforms only matter when evaluation and production discipline travel with the demo. That is already how I design. At this point in my career I want that customer-facing, architecture-adjacent seat more than another pure backend lane.

If LangChain customers are going to trust agents in production, Deployed Architect is where that trust gets earned — and that is the work I want to do.

Kind regards,

Karthikeyan Devadoss
