Dear Hiring Team,

Cursor is betting that AI-native development becomes the default way serious teams ship software. Solutions Architect, Central Europe — remote in Germany — is the post-sale architecture and enablement seat that makes that bet real for customers. That is the title and shape I want next. I am writing about the Solutions Architect, Central Europe role.

What I bring

- About ten years of Java/Spring backend work, including US large-enterprise delivery: Marsh in Phoenix (Bluestream / Digital Broker for Affinity — ~95,000 colleagues across 130 countries) and BCBSA in Chicago (national hub connecting state Blue Cross Blue Shield plans, ~118 million members system-wide).
- Since early 2026, one of a handful of engineers in an initial core AI team at a large retail-energy company: production AI triage with Azure OpenAI, vector retrieval, and a human approval step before any action, now used by several teams.
- Own agentic software-delivery platform (live): approval-gated agents, RAG with labelled retrieval evals, MCP tool boundaries — public proof that AI systems work can hold up past a demo.

How it fits this role

- Architecture discussions with the lead plus a public agentic delivery platform (evals, MCP, approval gates) for AI-native workflow design.
- Strong backend/DevOps-adjacent craft for CI/SDLC integrations and governance conversations.
- Remote Germany; English; experience enabling others (mentoring, informal AI teaching at NRG).

Developer tools win when architecture reviews leave teams faster and safer, not just impressed. I want to be measured on that outcome. At this point in my career I want that customer-facing, architecture-adjacent seat more than another pure backend lane.

If Cursor is how Central European teams rebuild their SDLC around AI, I want to help them do it well.

Kind regards,

Karthikeyan Devadoss
