Dear Hiring Team,

RunPod gives builders GPU cloud without the usual friction — and Forward Deployed Engineer EMEA is the role that keeps that promise when a customer's workload gets real. Customer success plus platform feedback is the kind of loop I want to own. I am writing about the Forward Deployed Engineer EMEA role.

What I bring

- About ten years of Java/Spring backend work, including US large-enterprise delivery: Marsh in Phoenix (Bluestream / Digital Broker for Affinity — ~95,000 colleagues across 130 countries) and BCBSA in Chicago (national hub connecting state Blue Cross Blue Shield plans, ~118 million members system-wide).
- Since early 2026, one of a handful of engineers in an initial core AI team at a large retail-energy company: production AI triage with Azure OpenAI, vector retrieval, and a human approval step before any action, now used by several teams.
- Own agentic software-delivery platform (live): approval-gated agents, RAG with labelled retrieval evals, MCP tool boundaries — public proof that AI systems work can hold up past a demo.

How it fits this role

- Cloud/backend production experience (AWS, containers-adjacent delivery, APIs) for onboarding and troubleshooting customer stacks.
- Cross-functional delivery with sales, product, and engineering — not ticket-only support.
- Remote EMEA / Berlin base; English day-to-day; US-enterprise communication experience from Marsh and BCBSA.

GPU cloud only works if the customer path is delightful under pressure. I like roles where technical depth and clear communication both matter on the same day. At this point in my career I want that customer-facing, architecture-adjacent seat more than another pure backend lane.

Builders choosing where to run AI will remember who made the hard parts feel simple — that is the RunPod FDE job, and it is the work I want next.

Kind regards,

Karthikeyan Devadoss
