Dear Hiring Team,

Smartsheet is putting multi-agent architecture and MCP-style tool packs into real customer deployments — and Sr. Forward Deployed AI Engineer (remote eligible in Germany) is the ownership seat for that work. Reusable Deployment Kits and evals are exactly the kind of craft I want to deepen. I am writing about the Sr. Forward Deployed AI Engineer (Remote Eligible in Germany) role.

What I bring

- About ten years of Java/Spring backend work, including US large-enterprise delivery: Marsh in Phoenix (Bluestream / Digital Broker for Affinity — ~95,000 colleagues across 130 countries) and BCBSA in Chicago (national hub connecting state Blue Cross Blue Shield plans, ~118 million members system-wide).
- Since early 2026, one of a handful of engineers in an initial core AI team at a large retail-energy company: production AI triage with Azure OpenAI, vector retrieval, and a human approval step before any action, now used by several teams.
- Own agentic software-delivery platform (live): approval-gated agents, RAG with labelled retrieval evals, MCP tool boundaries — public proof that AI systems work can hold up past a demo.

How it fits this role

- Personal platform already uses MCP tool boundaries, approval gates, and labelled evals — closest public proof for Deployment Kit thinking.
- Production AI triage adopted by several teams; backend depth for durable integrations.
- Remote from Germany; English required; ready for customer-facing delivery with travel.

Work management platforms win when AI agents are packaged so the next customer can reuse them. I like building patterns that survive the second deployment. At this point in my career I want that customer-facing, architecture-adjacent seat more than another pure backend lane.

If Smartsheet is going to make forward-deployed AI a productised practice, I want to help write the kits customers keep.

Kind regards,

Karthikeyan Devadoss
