Dear Hiring Team,

Taktile brings agentic AI to decisioning — and Forward Deployed Engineer in Berlin hybrid is the hands-on path that puts Python, SQL, and REST integrations in front of real customer teams. That embedded delivery seat matches where I want to grow. I am writing about the Forward Deployed Engineer role.

What I bring

- About ten years of Java/Spring backend work, including US large-enterprise delivery: Marsh in Phoenix (Bluestream / Digital Broker for Affinity — ~95,000 colleagues across 130 countries) and BCBSA in Chicago (national hub connecting state Blue Cross Blue Shield plans, ~118 million members system-wide).
- Since early 2026, one of a handful of engineers in an initial core AI team at a large retail-energy company: production AI triage with Azure OpenAI, vector retrieval, and a human approval step before any action, now used by several teams.
- Own agentic software-delivery platform (live): approval-gated agents, RAG with labelled retrieval evals, MCP tool boundaries — public proof that AI systems work can hold up past a demo.

How it fits this role

- Production-grade backend and API work; Python-capable; REST integrations across complex domains.
- Shipped LLM-powered triage with evaluation and human approval — customer-facing technical delivery, not demos alone.
- Berlin hybrid; English; ready to partner directly with enterprise users.

Decision platforms earn trust when the engineer in the room can debug the integration and explain the tradeoff. That is the FDE craft I want to practice at Taktile. At this point in my career I want that customer-facing, architecture-adjacent seat more than another pure backend lane.

Better decisions need better deployment partners — I want to be one of them on the Taktile team in Berlin.

Kind regards,

Karthikeyan Devadoss
