

Karthikeyan Devadoss

Forward Deployed Engineer (Claude / agents) | MCP, evals & backend foundation

Berlin, Germany · itskarthiksid@yahoo.com · +49 1521 0924553 · github.com/karthikdevadoss · Live AI platform

SUMMARY

Applying for Forward Deployed Engineer at Anthropic. Engineer focused on AI solution architecture, with about ten years of backend development since December 2016. Since early 2026, one of a handful of engineers in NRG Energy's initial core AI team, designing and building AI solutions hands-on alongside senior backend work, including production AI triage with a human approval step, adopted by several teams. 4+ years at NRG combining hands-on Java/Spring development with architecture discussions and design decisions alongside the lead. Independently designed and built a public agentic software-delivery platform: approval-gated agents, a deterministic vs LLM decision split, RAG with labelled retrieval evals and MCP tool boundaries.

CORE SKILLS

AI architecture	AI solution design · human-approval & capability boundaries · deterministic vs LLM decision split · RAG & retrieval evaluation (recall/MRR) · MCP & agent tool boundaries
AI stack	Azure OpenAI, vector retrieval (production, NRG) · Python, Anthropic API, embeddings, Postgres, Playwright (personal project)
Backend	Java, Spring Boot, REST, GraphQL, JWT/FusionAuth, AWS Lambda/SAM, SQS, Oracle, Docker, Jenkins, JUnit, Kafka, FHIR, Apache Camel

EXPERIENCE

Senior Backend Developer — NRG Energy

End client; employed via Remote GmbH

Mar 2022 – present

- Initial core AI team (since early 2026):** one of a handful of engineers in the team, designing and building AI solutions hands-on alongside senior backend work.
- Production AI triage:** Azure OpenAI with vector retrieval and a human email-approval / tool-use boundary before any action; adopted by several teams; informal teaching.
- Architecture:** took part in architecture discussions and design decisions with the lead.
- Hands-on Java/Spring Boot: REST, GraphQL, JWT/FusionAuth; AWS Lambda/SAM; SQS/DLQ.
- Mentored offshore developers; monthly production on-call.

Java Developer Consultant — Blue Cross Blue Shield Association (BCBSA)

Jun 2019 – Mar 2022

- Java/Spring Boot REST services for healthcare integration; hands-on FHIR in member/coverage/claims interoperability.
- Application-side Kafka producers and consumers for domain events; careful handling of sensitive healthcare data.

Java Backend Developer — Marsh (Digital Broker / Bluestream)

Via Innovecture LLC

Dec 2016 – Jun 2019

- Java/Spring APIs and carrier integration (Apache Camel routes, ACORD-oriented mapping), implemented within the technical architect's design.

PERSONAL PROJECT

Agentic Software Delivery Platform

PERSONAL PROJECT

Independently designed and built

Live demo · GitHub repo

- Deterministic vs LLM split:** deterministic checks kept separate from LLM proposals; a Python agent (Anthropic API) plans and applies changes to a real Spring Boot target via tool calling.
- Human-approval boundary:** structural approval gate; the model has no code path to approve its own change, and approval is bound by content hash to the exact change.
- RAG eval design:** local retrieval (embeddings, cosine similarity, content-hash indexing) with a labelled eval (recall/MRR).
- MCP / tool boundaries:** MCP server for read-only repository tools; independent QA subagent without write tools; durable Postgres event ledger with versioned pricing.
